RETAIL-DASHBOARD

Orders	Paid Revenue	AOV	Return Rate %	Refund % of Sales
300K	3.02bn	10.06K	4.88%	1.66%

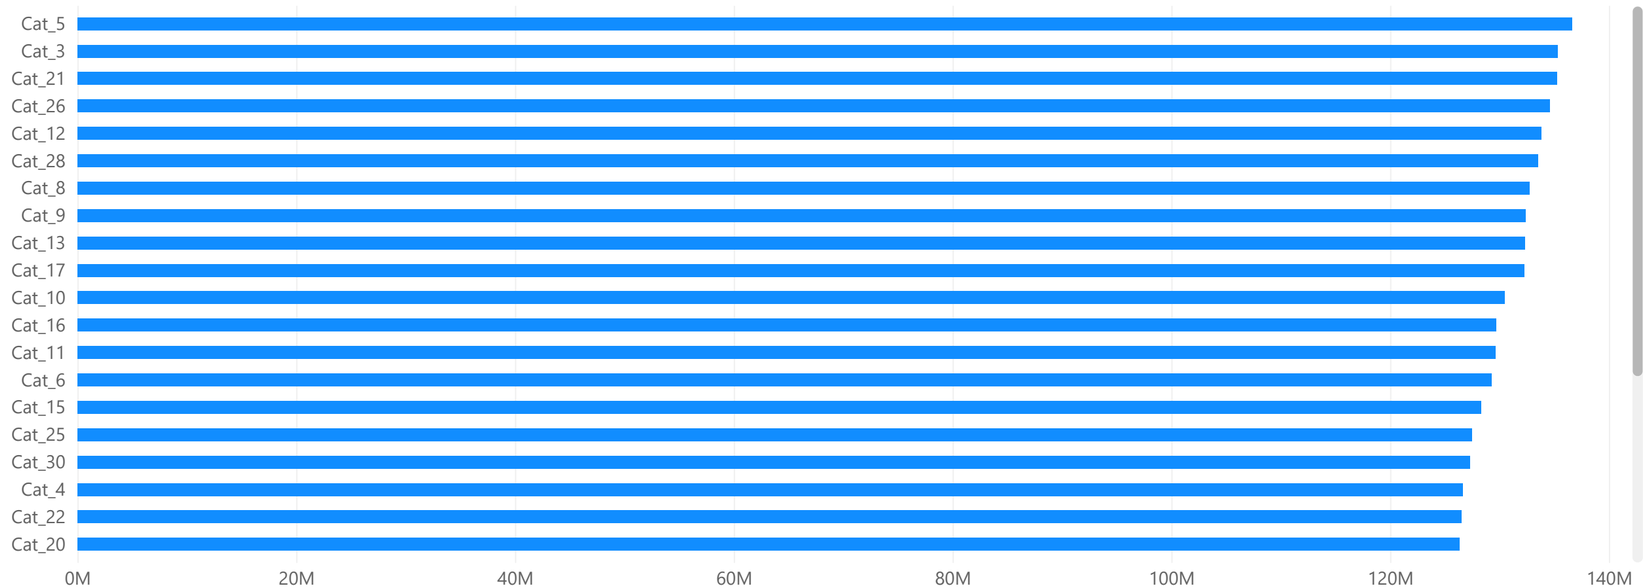

Orders per day: flat at ~206 across 2020-2023

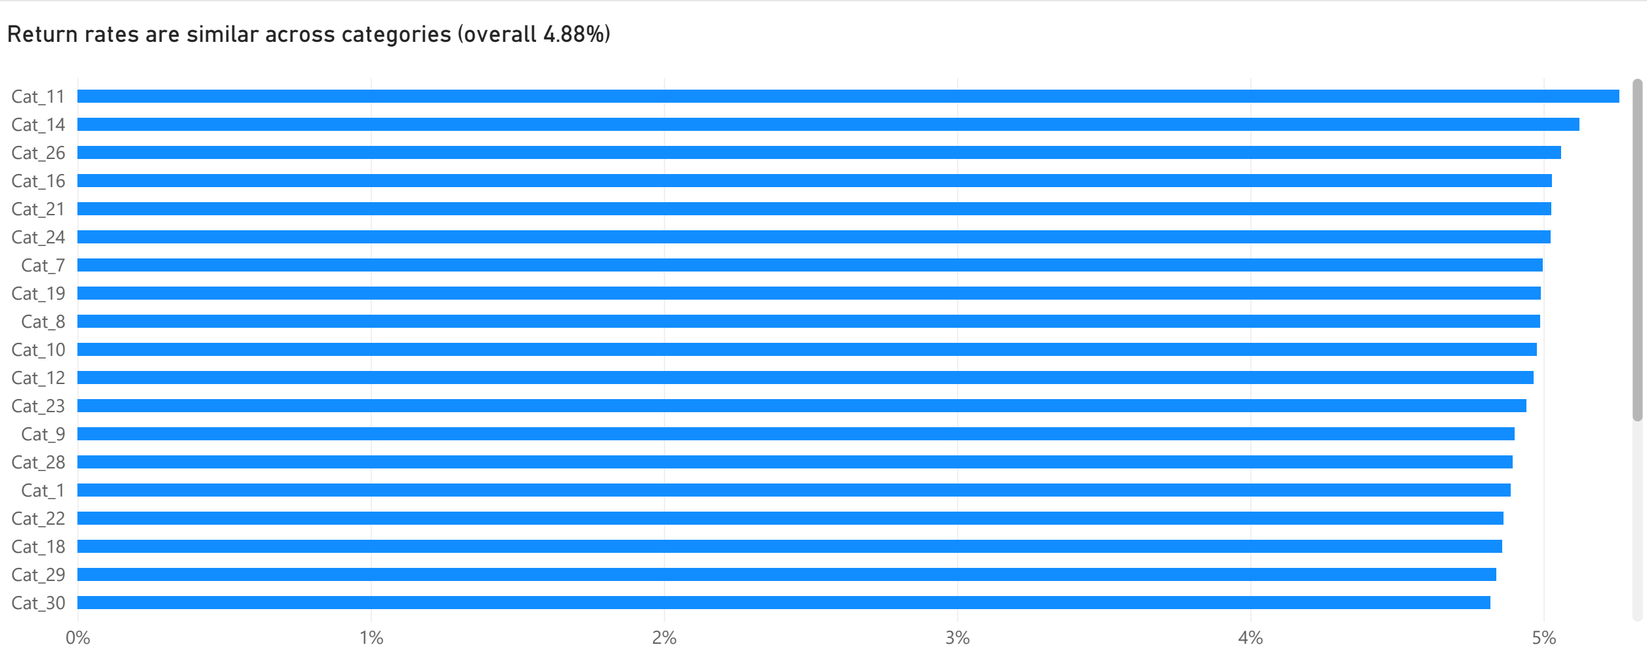

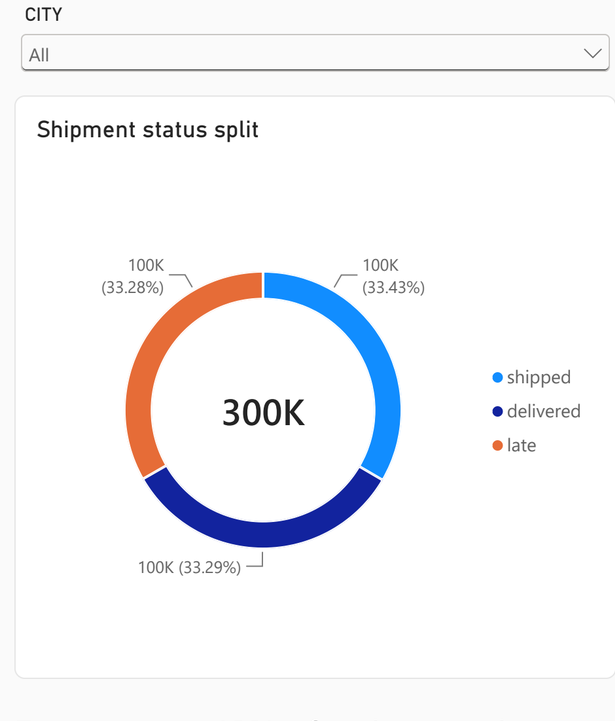

Discount level does not change orders per promotion

Raw month-over-month swings come from days-in-month. Normalized per day, orders are flat. Data appears synthetic (see Page 2 notes).

Data notes: 40% of orders predate customer signup. 25% of returns refund more than the item value (capped in analysis). Payments match item totals in only 10 of 300,000 orders. 40,767 orders have no items. Customer revenue concentration (top 10% = 19.1%) is reproduced by a random-assignment simulation, product rankings are unstable (correlation -0.007), and shipment status splits into almost exact thirds. This dataset appears synthetic.
